JANAVAANI AI

Voice-first document understanding for accessible public information

JANAVAANI AI helps people understand important information in documents. Upload a notice or circular, ask questions in English or Telugu by text or voice, and receive a clear answer grounded in the document—with supporting evidence and an option to listen.

THE PROBLEM

Important instructions are often buried in lengthy PDFs, scanned notices and circulars. Language barriers and dense wording can make it difficult to identify eligibility, deadlines, required documents and next steps.

THE SOLUTION

JANAVAANI AI turns a document into an interactive question-and-answer experience. Users upload a PDF or image, ask a question in English or Telugu, and receive a concise response based on relevant extracted passages rather than a general answer.

WHO IT HELPS

Students, applicants, citizens and anyone who needs help understanding government notices, scholarship guidelines, educational circulars, institutional documents and application instructions.

HOW IT WORKS

1. Upload a PDF or image.
2. Extract PDF text or use OCR for scans and images.
3. Ask a question by typing or recording speech in English or Telugu.
4. Gnani Prisma converts speech to text; relevant document text is selected and sent with the question to Gemini.
5. View the answer and supporting evidence, then listen using Gnani Timbre.

TECHNOLOGY

Gnani: Prisma speech-to-text and Timbre text-to-speech. **AI:** Gemini for answer generation. **Document processing:** PyMuPDF and Tesseract OCR (English and Telugu). **Application:** React, Vite and FastAPI.

CURRENT IMPLEMENTATION

The current prototype supports PDF and image uploads, English/Telugu voice input, document-based question answering, visible evidence and spoken responses. Retrieval currently uses lightweight text matching; semantic/vector search and persistent multi-user document storage are potential future improvements.

EXPECTED IMPACT: Make important document-based information easier to find, understand and act on through familiar languages, voice interaction and answers linked to source evidence.
